

# Specialty pharmacy linkage

Use case:

HealthVerity Census

## Challenge

A top 20 biotech company with specialty therapies on the market must identify where patients are in their treatment journey in order to provide the right support services and improve access.

#### About HealthVerity Census

HealthVerity Census<sup>®</sup> is the first step in driving a data strategy that's built upon data activation, data interoperability and patient longitudinality. It leverages a stateof-the-art SaaS de-identification solution to activate internal touchpoints and data isolated in silos across the enterprise.

Even after building a robust ecosystem to improve the patient experience, the company **could not connect** important touchpoints across the patient's healthcare journey. It **lacked visibility** into the sequence of events surrounding prescription fills, such as payer authorizations, hub or pharmacy routing, pharmacy changes, and financial assistance program enrollment. The company needed a comprehensive view of the patient that connected all relevant touchpoints across care.

Real-time identity resolution 10x more accurate matching

HealthVerity Census software connects the patient journey securely across your network.

Access a more comprehensive patient journey.

The company used HealthVerity Census to de-identify patients' personally identifiable information (PII) and assign a unique but persistent identifier called a HealthVerity ID (HVID). HVIDs provide anonymized and **HIPAA-compliant linkage** between all parties in their patient management ecosystem.

The company now has **one view** of the patient journey across their supplier ecosystem and can more effectively provide the right

### Link to major data types

#### EMR data

- Hospital chargemaster data
- Lab results
- Closed payer claims
- Media data link
- Pharmacy claims

#### programs to speed up access to therapy.

It can also link the HVID-enabled patient data to HealthVerity

Marketplace, an interoperable ecosystem comprised of more that 150

billion de-identified transactions from 75+ major data providers. The

patient journey can be appended with key attributes like social

determinants of health, prior therapies, media touchpoints and more.
